... i found the key generator and i have created the keygens!! MEMBER Thank you for making this article. I just purchased some ebook copies of "Ultimate Guide to Spam" and "Top 10 Tips on Making Money with Spam". I was really dissapointed that they didn't help me with any ebook. I was looking forward to start generating some spam. I found a program called "Spam Generator" which can generate spans, so I'm going to try this one. Can you tell me the best program? ThanksQ: the difference between tag and css :not() selector what is the difference between the tag and css :not() selector if i have a form with: add to favorite then in css i can use: input[type="checkbox"]:not(label) but i can also write: label:not([for]) can someone explain to me why it works? A: The input[type="checkbox"] selector will select all the elements which are checked and not the ones which have the checked attribute. The label:not([for]) selector will select all the elements which are not the ones which have the for attribute. input[type="checkbox"] will select any checkbox that is a descendant of another checkbox. This will not work if you have more than one checkbox. label:not([for]) will select any that does not have the for attribute. You can use both together: input[type="checkbox"]:not([for]) This will match all checkboxes that are not child elements of a that has the for attribute. Garden Inspired Wedding | Danielle + Ryan Garden inspired wedding at Jacky's Hill, near Matlock. This shoot took place on an August Bank Holiday weekend and I had so much fun with this gorgeous couple. I love how Danielle & Ryan's wedding was so garden themed, but with a modern twist with some edgy styling, lots of greenery and even some frothy bubbly and a sprinkling of 82157476af
